

This specification describes features of Miracle Power Conditioner

1. High Performance.
2. Surge/Spike Protection.
3. EMI/RFI Filtration.
4. Overload Protection.
5. Compact & Cost Effective.

RoHS  
Compliant

REACH  
Compliant

### Technical specification

<b>Maximum output Current</b>	9 AMPS
<b>Maximum Continuous Operating Voltage</b>	275 VAC RMS
<b>Line Cords</b>	6ft. Captive, 1.5mm <sup>2</sup> , with 3-conductor Power Plug (Type-M).
<b>Noise Attenuation (Transverse Mode)</b>	Greater than 23db, 200Khz to 10Mhz
<b>Operating Voltage</b>	220VAC 50Hz
<b>Dimension</b>	1.75" H x 19" W x 3.75" D
<b>Output Socket</b>	IEC – C-13, 9 Outlets
<b>Weight</b>	1.6 Kg.
<b>Peak Impulse Current</b>	4000 AMPS
<b>Spike Protection Mode</b>	Line to Neutral
<b>Marking</b>	Specification & Model P/N.
<b>Overload Protection</b>	Resettable Thermal Circuit Protector

### Mechanical Dimension (in inches)

#### RIG INSTRUMENT

Electrical surges can destroy your rig in a single moment. Voltage fluctuation which puts added wear and tear on your gear. **Miracle M-9** surge/spike protect your gear from surge which is common during practice. EMI/RFI filtration will give your audio noise free clean and quiet.

#### RECORDING & REPRODUCTION

How you can get noise free audio recording? During recording if some noise comes it can diminish your sound quality. **Miracle M-9** have EMI/RFI filtration cleans the incoming dirt AC power which cause noise and effectively improves your audio performance. Audio sounds better and great protection for gear and surge/spike provides safe recording.

#### LIVE EVENTS

How to prevent the equipment from surges/spikes? Live performance, recording studio or other events have some dirt EMI or noise come like as hum or buzz and it may interfere heard in stereo signals from mixers or other processors. **Miracle M-9** provide EMI/RFI filtration keeps the bad stuff out. It keeps your equipment safe and sounding clean.

#### DJ EQUIPMENTS

Single power surge is a very brief spike in your power. It changes in the power load from appliances going on and off. Any change in the shape of an audio waveform compared between two points in a signal chain. Generally the term refers to the desirable or undesirable "breaking-up" of audio (as in distorted guitars.) As it applies to audio equipment, noise is unwanted sound that is not related to the signal. Noise sources can be external to a device, such as environmental noise sources. Or the noise can be generated internally. **Miracle M-9** provide protection and EMI/RFI filtration. With a 9A capacity and nine total outlets, it's enough to power your equipment.
